Southern Ontario Vascular Plant Species List

This species checklist has been compiled in order to assist field biologists who are sampling vegetative plots in Southern Ontario. It is not intended to be a complete species list for the region. The intended range for this vascular plant list is Ecoregions (Site Regions) 5E, 6E and 7E.

Nomenclature

The nomenclature used for this listing of 2,532 plant species, subspecies and varieties, is in accordance with the Ontario Plant List (OPL), 1998 [see [Further Reading](#) for full citation]. This is the Ontario Ministry of Natural Resource's publication which has been selected as the corporate standard for plant nomenclature.

There have been many nomenclatural innovations in the past several years since the publication of the Ontario Plant List that are not reflected in this listing. However, the OPL has a listing of many of the synonyms that have been used recently in the botanical literature. For a more up to date listing of scientific plant names visit either of the following web sites:

Flora of North America - http://www.efloras.org/flora_page.aspx?flora_id=1

NatureServe - <http://www.natureserve.org/explorer/servlet/NatureServe?init=Species>

People who are familiar with the Natural Heritage Information Centre (NHIC) plant species list for Ontario, will notice some changes in the nomenclature. For example, most of the *Aster* species have now been put into the genus *Symphyotrichum*, with a few into the genus *Eurybia*. Flat-topped White Aster is now called *Doellingeria umbellata*. The genus *Scirpus* has also been split into different genera, with just a few remaining species being retained in the original genus. Most of these species are now in the genus *Schoenoplectus*, *Trichophorum* or *Bolboschoenus*.

With the use of DNA and other chemical analysis, botanical researchers will probably rearrange many more species in the near future.

Species Code

For data entered into handheld palm pilots, the use of abbreviated codes is often required. Most units do not have a memory capacity to hold pull down menus for all 2,532 species. Therefore an abbreviated code has been developed that is unique for each species, subspecies and variety.

The seven digit code is constructed by using the first four characters of the genus name followed by the first 3 characters of the species name. Therefore, White Trillium (*Trillium grandiflorum*) has the 7 digit code of TRILGRA. If there is a subspecies or variety ranking for a species, then the first two characters are used from the species name, and the third character is the first letter of the subspecies or varietal epithet. Enchanter's Nightshade (*Circaea lutetiana* ssp. *canadensis*) has the code CIRCLUC. In situations where the 7 digit codes for two separate species are the same, then another character is used for the seventh digit in the code. For example, Water Arum (*Calla palustris*) and Common Water Starwort (*Callitriche palustris*) would both produce the same seven character code. In this case the code CALLPLS is used for Water Arum, and CALLPLU is used for the Common Water Starwort. Below are some additional examples;

Red Oak	<i>Quercus rubra</i>	QUERRUB
Black Maple	<i>Acer saccharum</i> ssp. <i>nigrum</i>	ACERSAN
Sugar Maple	<i>Acer saccharum</i> ssp. <i>saccharum</i>	ACERSAS
Northern Lady Fern	<i>Athyrium filix-femina</i> var. <i>angustum</i>	ATHYFIA
Plantain-leaved Sedge	<i>Carex plantaginea</i>	CAREPLA
Broad-leaved Wood Sedge	<i>Carex platyphylla</i>	CAREPLT
Slender Wood Sedge	<i>Carex gracilescens</i>	CAREGRA
Graceful Sedge	<i>Carex gracillima</i>	CAREGRM

SRank

The Natural Heritage Information Centre uses a ranking system that considers the provincial rank of an element as a tool to prioritize protection efforts. The provincial (**S**ub-national) rank is known as the SRANK. These ranks have been assigned using the best available scientific information, and follow a systematic ranking procedure developed by The Nature Conservancy (U.S.). The ranks are based on three factors: estimated number of occurrences, estimated community extent, and estimated range of the community within the province. The provincial ranks are summarized below.

S1 - Extremely rare in Ontario; usually 5 or fewer occurrences in the province, or very few remaining hectares

S2 - Very rare in Ontario; usually between 5 and 20 occurrences in the province, or few remaining hectares

S3 - Rare to uncommon in Ontario; usually between 20 and 100 occurrences in the province; may have fewer occurrences, but with some extensive examples remaining

S4 - Considered to be common in Ontario. It denotes that a species is apparently secure, with over 100 occurrences in the province

S5 - Indicates that a species is widespread in Ontario, it is demonstrably secure in the province

These provincial ranks may further be modified.

S2S3 - Indicates that an element is rare, but insufficient information exists to accurately assign a single rank

SE - Indicates exotic introductions to the flora

SH - Indicates that an element is known **historically** for the province, but it hasn't been seen in the past 20 years. It is not known conclusively to be extirpated in Ontario

SHB - Indicates that the species is of a **hybrid** origin

SX - Indicates that an element is **extirpated** from the province

SU - Indicates that the status is **uncertain** due to insufficient information

SRF - Is a species that was **recorded falsely** for the province

Form Code

This column describes the general form of the plant species. Is it a forb, shrub or tree?

Non vascular plants such as Mosses, Liverworts, Hornworts, Algae and Lichens have general placeholder codes which have been included in this listing. Some of the more open communities have a significant amount of covers of non vascular plants, so it is necessary to record these entities within a sample plot or polygon.

AL	Algae	filamentous algal species found in aquatic habitats
FE	Fern	non-flowering, vascular plant, reproducing by spores

FO	Forb	herbaceous broad-leaved plant
GR	Grass	graminoid plants that have stems with nodes (Poaceae)
HR	Hornwort	members of the Anthocerotophyta division of plants
LC	Lichen	crustose, foliose and fruticose lichen species
LV	Liverwort	members of the Hepaticophyta division of plants
MO	Moss	members of the Bryophyta division of plants
RU	Rush	graminoid plants with round stems (Juncaceae)
SE	Sedge	graminoid plants with angular stems (Cyperaceae)
SH	Shrub	plants with erect, reclining or prostrate woody stems (usually with more than one stem)
TR	Tree	woody perennial plant having a single (1- 3), usually elongate main stem
VI	Vine	herbaceous plant that trails, clings, or twines, and requires support to grow vertically
VW	Woody Vine	a vine with a perennial woody stem
